Cleaning technology Municipal technology Water jet technology

Our contribution to the future!

Preserving resources. Recycling materials. Reducing CO₂.

Sustainability for the world of tomorrow

Providing future-proof cleaning, municipal and water jet technology, Hako stands for solutions without compromise. This also applies in terms of sustainability. When developing our products, we always consider the entire life cycle: from production with environmentally friendly, CO_2 -saving processes in modern plants and economically efficient, eco-friendly use to recycling and disposal.

Bringing out the best – for the environment!

The recycling process begins with the shredding of the old machine. We then examine it for recyclable materials. Many of our machines are almost completely recyclable. As a partner of the Blue Competence sustainability initiative of the mechanical and plant engineering industry, our goal is to keep increasing the proportion of recyclable materials in production – while at the same time reducing CO₂ emissions.

Reducing, reusing, recycling

Already during the production of our machines, we make sure to use the highest possible percentage of recyclable materials. For example, the rotating parts of our walk-behind scrubber-driers, such as the solution and recovery tanks, are made of polyethylene. The chassis, handlebar and squeegee lift are made of steel and are also 100 % recyclable. When it comes to packaging, we are increasingly using wood and cardboard to sustainably reduce plastic waste. For example, the Scrubmaster B45 CL TB510 has a high recyclability of over 90%.

Highly recyclable

When recycling, we search the machines for materials such as copper, steel, aluminium and polyethylene.

Achieving the best results sustainably – this guiding vision shapes our entrepreneurial actions. Here and today. And with a view to the future!

Hako for the future

Environmental protection and sustainability are integral components of the corporate philosophy at all Hako sites.
